"The Elden Ring is a fantasy world inhabited by mysterious beings called Elden, who have experienced a shattering event during the past four hundred years. The main character of the story, a player, has been accepted into the Elden Ring and has taken up the quest to be their leader, in hopes of clearing the evil fiend's name and restoring order. When the main character enters the Lands Between, a vast and bustling frontier filled with Elden and various monsters, he or she must fend off an increasing number of enemies while undergoing quests and discovering various items and events." What's new in Elden Ring:

WHAT DO YOU THINK SHOULD BE ADOPTED AS A NEW CAMPAIGN PIECE? I hate the world of "barbarian" characters. So I want to make a world where there are a variety of ways to have real humans in the world. I hope to create a game where you can adopt various styles of play, including the art of drawing in technical aspects like battle techniques, strengthening your body, or developing your aura.

THINKING ABOUT A STYLE OF PLAY THAT YOU WANT TO ADVANCE, WHAT PERFORMANCE ARE YOU LOOKING FOR? I'd like to make a game where there are a variety of buildings to connect with others. If we could make it so the virtual space of the game world is able to be split using a VR function - it would make a world where you'd be able to reach allies even when separated. It doesn't have to be an extension of VR support. If there are people that have a disability and want to play with a character, the characters that are included in the game should have the minimum amount of burden and should be playable even for parents that use a wheelchair or can only use a walker.

[from the game planner] It's a "between a ball and a wall" design. You move around by holding down the right analogue stick and swinging the left; when you swing, you make contact with the ground and acquire momentum. You have the "beat" of the ball that you swing, and can pounce on the ball at the last moment. You can attack the ball by stepping forward with the left analogue stick or by swinging the movement controller to "fly." The movement controller and analogue stick are separate, so you can freely adapt to whatever your player play style may be.

[from the game planner] The attack becomes gradually more painful as the character loses HP.
