Directory Size Explorer Crack With Key [32|64bit] (Latest)

The Pinpoint application from Foxtag is an app that allows you to record actions performed on your computer, and also display them in a graphical form. In other words, you can visualize all the actions you take on your computer. You can even attach a keyboard to it, making it a two-in-one tool. At the moment, this app is available for Windows only, but a version for Mac OS X is being developed as well. About the Pinpoint app The program works by attaching a hardware sensor to your computer. You can attach it to a USB port or even a controller connected to your computer, such as keyboard. Once installed, it is possible to press keys and watch what happens. As simple as this sounds, the app is quite useful for system and hardware monitoring. Its main purpose, however, is to allow you to record the screens you open on your computer and see what you've done. This is quite useful for backing up work and preparing articles, so it can be a useful tool for writers and journalists. Foxtag is actively developing the Pinpoint app, and it seems that the software is now up to version 5.0. Features of the Pinpoint app The main features of the app, and the reason why we called it Pinpoint, is the graphical display of everything you do on your computer. This feature makes it easier to search for specific activities, so it helps you find what you're looking for. This includes the following: For instance, you can see which applications are currently running Record screenshots, for instance of your current desktop You can attach a keyboard to your computer and use it to control what you're doing All actions you take on your computer can be recorded in a graphical way, and later displayed You can even record screen videos from your computer There are also a couple of other features, but these will be limited to the upcoming Mac OS X version. Software requirements At the moment, the Pinpoint app is only available for Windows users. When it comes to Mac OS X users, it seems there are only plans to make this available as well. However, the software is currently being developed. Limitations of the Pinpoint app Pinpoint comes with some limitations. Some are based on its hardware capabilities, but some limitations are also software-related. In this way, the user is forced to use the software in an ideal environment

Directory Size Explorer Crack Activation Code [Mac/Win]

Directory Size Explorer allows you to use its free version to monitor disk space. A clean interface with a neat feature set, with the ability to scan a fixed drive, or a removable USB drive, and also all the files and folders inside, combined with the possibility to analyze those files and folders. The software works using Java, making it compatible with virtually all Java-based operating systems. It also requires you to have Java Runtime Environment. In the free version, there are several file sorting options, a file type option, as well as many functions with the intention of helping you understand disk space usage. Sorting options include the ability to sort by name, file size, and date last modified. There's no option to sort files by file type, but it could be added at a later stage. Directory Size Explorer supports drag & drop functionality for easy navigation. With the help of the software, you can quickly scan a fixed drive, a removable drive, or even a network share. Files are organized according to the size of their directory, and folders are listed in a directory tree. There's a search feature, but it's not that useful. In addition, it's possible to open a selected file or folder, which should be handy for developers working on large projects. The program has a very simple and clean design, with several options visible at all times. The interface is compatible with Windows XP, Windows Vista, Windows 7, and Windows 8. There are no additional functions available, and no options are hidden away in an unknown menu. The program's main advantage is the ability to quickly scan drives, making it suitable for software developers, who need to monitor how much space their files are taking up. The navigation panel only appears after the directory has been scanned, but it doesn't hold a real progress indicator, instead you have to wait for the operation to be completed. The set of options that this application has to offer are fairly basic, and mostly used for analyzing the size of directories, and especially the files and folders inside them. There's no option to sort files, and it would have been more useful to have additional filter options, but the simplicity of the program is the real plus. What's New in version 1.0.0.6: Added the "--clear-finder-memory" option. Added the "--hide-finder-panels" option. Quick
