The new abilities and features remain largely in line with what Adobe already had in place. Object selection and brush attacks remain the bread and butter of the program, but this version also includes a host of new features—including a buit-in clone tool—that gives it a certain bounciness. All told, this is a solid update that preserves the strengths of the previous version and adds even more state-of-the-art tools and features that make it a pleasure to use. One of the best new features is the ability to lock and unlock the Edit Crop tool. This makes it easier to reposition an image, and it also makes it possible to take an image from the free "working" area and use it to lock the edit position, if you so desire. If you're going to crop, that's a great way to take advantage of the crop tool to preview an image first, try an effect, and then crop it once you're happy with the result. A shortage of effective options for printing and e-paper in the midst of COVID-19 makes these options a little more desirable to have than in the past. And while the print and paper options are very rudimentary, if you don't want to bother with a dedicated printer, you're still able to print remotely. The new Select tool, Share for Review, and Cross Process workflows are all excellent for designers using the program. The new Select tool is a powerful version of the old Magic Wand, but you can perform advanced searches on the canvas of your selection, which is something you can't do if you use the old Magic Wand tool.

And, for those who feel that they would prefer to be working with SVG rather than PSD, there are few other worthwhile options that offer vector graphics capabilities without the complex and slow performance of InDesign. InDesign can be used as a workaround to create vector art, but in the end, InDesign works best for general page layout. For those just learning how to make charts in InDesign, there are several resources on Envato Tuts+ to get started, like this free InDesign tutorial on chained layers and building graphs. If you are looking for an alternative to Photoshop, you might be a better off starting with Apple's iWork suite, which contains a variety of offering, including Pages. Pages is designed to mimic the feel of Adobe InDesign word processing and drawing features, while still allowing for export to a variety of formats and use on the web. The newer iWork '14 update adds even more power to create beautiful charts and graphs using Graphite. And, if creating layouts for print is your priority, Pages is fully integrated with Apple's PDF design layout. Many designers use Pages as a standalone tool or along with Photoshop or InDesign for creating open source website and print design layouts. With Pages, designers can create and edit their own templates, and then "design" their pages with live web previews and browser output for print. And, finally, for those of you who tend to work with more free and creative tools, there are other web-based creative suites that allow you to work and export to a variety of formats. They naturally lack the flexibility of professional design software, but range from free and come with a wide range of features. These include apps such as Google Docs, Hugo and Scribus. Hugo is the editor of choice for SVG and PSD files, and Scribus is a fast and feature rich print layout tool.
